

VON ANDREW M. CASTILLO

voncastillovon@gmail.com | 09617075345 | 130 A E Mendoza Street, Buting, Pasig City
www.linkedin.com/in/voncastillo

Computer Science Student with a strong academic and practical background across backend systems, full-stack web applications, game development, and IoT hardware integration. Highly proficient in C# and JavaScript, with a proven track record of architecting core logic, designing databases (SQL), and implementing cloud integrations (Firebase/Cloudinary). Versatile and adept at managing end-to-end application development, from front-end user interfaces to cross-platform API communications and hardware prototypes.

EDUCATIONAL BACKGROUND

UNIVERSITY OF MAKATI

Bachelor of Science in Computer Science
Major in Application Development

West Rembo, Taguig City
2022 - Present

BENIGNO "NINOY" S. AQUINO HIGH SCHOOL

Senior High School

Comembo, Taguig City
2020- 2022

TECHNICAL SKILLS

Languages: C#, Python, Javascript, Java, HTML

Databases: Firebase, MySQL

Tools: Github, Vercel, Arduino/NodeMCU, Unity, Android Studio

EXPERIENCE

University of Makati - Software Developer

February 2026 - April 2026

- Developed a mobile application for keeping track of apps for students.
- Developed a RESTful API for adding reviews, account creation, and app downloading
- Created a website to increase classroom discourse.

ACADEMIC PROJECTS

Game Developer- Scamester

August 2025 - Present

- Designed and implemented the algorithm for automatic difficulty selection.
- Implemented the user interface of the game in Unity.
- Established an API for the communication of the model and the game.

Back End Developer - Booklat

February 2025 - June 2025

- Using C#, I created the back-end logic of the system.
- Established a connection between Firebase and the system.
- Used a cloud storage for storing images for the books using Cloudinary

Game Developer - Deception

August 2024 - January 2025

- Ensured the proper sequence is followed according to the game design.
- Implemented the character animations, sound system, sound effects, and environment effects.
- Implemented the whole game logic using C# and Unity.

Full Stack Developer - Mobile Pet Feeder

February 2024 - June 2024

- Created a hardware prototype model using NodeMCU and Arduino.
- Establish a connection between the mobile application and the Arduino using Java.
- Implemented the back-end logic of the NodeMCU, Arduino, and Mobile Application

Back End Developer - Library Management System

August 2023 - January 2024

- Designed the database and implemented it using SQL
- Established the core back-end logic of the system using C#.
- Improved the performance and efficiency of the system.

Full Stack Developer - Kopi Cold Brew POS

February 2023 - June 2023

- Implemented the user interface using HTML, CSS, and Javascript.
- Wrote the back-end logic using Javascript.
- Collaborated with the team to come up with the design.
